### Local and General

C. Calhoun moved into the new house he has erected on Strathecona street, last week end.

J. Blough has had a well drilled behind his house on Ostler street, C. White's outfit punctured the earth to the extent of 61 feet.

Mr. and Mrs. Cavander and Mrs. Wilson returned home on Monday evening after spending a holiday at Banff.

Dick Onkles is on the job adjusting the claims for hail damaged crops in the north district.

The train service changes again on Sunday next. The times of the trains appear in another column.

The Canada Food Board have issued a notice to the effect that all restrictions have now been removed from the consumption of pork. This food may now be served at any time.

Frank Collicutt put the finishing touch on the Union Church Sunday School picnic on Tuesday afternoon last, which was to have been held in Fraser's grove. Frank showed his goodness of heart when he went over and took the whole outfit to his premises on the Willow Springs Ranch, and entered into the various games with as much heartiness as any of them.

The annual picnic of the Union Sunday School, was held on Tuesday, the cars leaving the church at 1:30 p.m. On arriving at the selected place in McPherson coulee, Mr. F. Collicutt came over and invited all the party to his home on Willow Springs Ranch for the afternoon. The races, tug-of-war and other sports were eagerly contested by the competitors and enjoyed by the onlookers. Supper was served about 5:30 by the ladies on the lawn which left nothing to be desired, ice cream was served and the prizes distributed to the successful competitors in the different events.

Three cheers were given for Mr. F. Collicutt by the gathering before leaving thus bringing to a close a very enjoyable afternoon.

The teachers and officers thank all those who supplied cars or in any way assisted to make the picnic a success.

A Karn Organ for Sale, in good order. Will sell cheap. Apply C. Wicks. Box 76.

She—I heard a noise very late when you came in.

He (facetiously)—was it the night falling?

She (sternly)—No; it was the day breaking.

Meanness.—Some people are so mean that they begrudge a mouse the cheese that catches it.

For Sale Cheap.—Dining Room Suite in fumed oak, consisting of buffet, extension table, and 6 chairs. Also one golden oak bedroom suite, consisting of dresser, washstand, bed mattress and springs, and china toiled set.—Apply to Wm. Laut, Crossfield, Alta.

# SUPREME ALLIED WAR COUNCIL IS CONFIDENT OF ULTIMATE SUCCESS

ALLIED ARMIES DISPLAY STEADFAST COURAGE

Are Resolute in the Determination Not To Sacrifice a Single One Of the Free Nations Of the World To the Despotic Rule of Kaiserism

The supreme war council, which has had under advisement the entire war situation, has expressed its full confidence in the outcome of the war with the aid of the American forces. Complete confidence in General Foch is also expressed, and thanks are extended to President Wilson for his co-operation in the United States can bring its full American troops.

"The supreme war council held its sixth session under circumstances of great gravity for the alliance of free peoples," says General Foch. "The German government, relieved of all pressure on the eastern front by the collapse of the Russian armies and peoples, has concentrated all its efforts on the west. It is now seeking to gain a decision in Europe by a series of desperate and costly assaults upon the allied armies before the United States can bring its full strength effectively to bear.

"The advantage it possesses in its strategic position and superior rail way facilities has enabled the enemy to commence the second phase of the war, which is to be successful. It will undoubtedly renew its attacks, and the allied nations may be still exposed to critical hours."

"A full review of the war position, the supreme war council is convinced that the allies, bearing the trials of the fortification campaign, and the fortitude as they have ever exhibited in defence of the right, will baffle the enemy's purpose." In due course, General Foch has decided to sustain and support the armies in the field. The arrangements for unity of command have greatly improved and are working smoothly and with success. The supreme war council has complete confidence in General Foch. It regards him as the most resolute and determined man in the world in the estimation of the allied troops.

"Thanks to the prompt and cordial co-operation of the president of the United States, General Foch, who was seen on foot more than two months ago, has been able to bring the transportation and brigading of American troops to a high point, enabling the enemy to gain victory by wearing out the allied reserve before he has exhausted his own."

"The supreme war council is confident of ultimate success, and the allied peoples are resolute not to sacrifice a single one of the free nations of the world to the despotic rule of Kaiserism. The allied forces are displaying the same steadfast courage which has enabled them on many

## A Fight for Life

It has been sight or die for many of us in the past and the lucky people are those who have suffered, but who now are safe. The German headquarter's warning signal in time to correct their trouble with that wonderful new discovery of Dr. Piero's, called "An-urie." The German headquarter's warning signal, some of which are dizzy spells, backache, irregularity of the urine or the painful twinges of the rectum or the heart, which may make a man die of the dangerous forms of kidney disease, such as diabetes or stone in bladder.

To overcome these distressing conditions, the German headquarter's warning signal, avoid a heavy meat diet, drink freely of water and at each meal take An-urie (An-urie streng). You will, in short, find that you are one of the firm indorsers of An-urie.

Hamilton, Ont.—"For kidney disease I have never seen a better medicine than An-urie to equal An-urie. When I started to take it I started to feel very well and had lame back-pains in the cords of my neck and shoulders and all over my body. The water was high colored and the urine was dark. All of these conditions left me after one week's use of An-urie and I consider it the greatest of all the many medicines I have ever taken."

Toronto, Ont.—"My husband suffered severely with pain in his back for a few weeks. He commenced to take An-urie and in three or four days he not only looked better, but remarked that his back felt much better, and now says that he can't have any more. It is a pleasure that we recommended An-urie."

Mrs. MARY BYAN, 66 Section St.

afte

for a few weeks. He commenced to take An-urie and in three or four days he not only looked better, but remarked that his back felt much better, and now says that he can't have any more. It is a pleasure that we recommended An-urie."

previous occasions to defeat a German onset. They have only to end with faith and patience to the end to make victory for freedom secure.

"The free peoples and their magnificent soldiers will save civilization."

## Studying Canadian Lumbering Methods

Prominent Official of India Assigned to Investigate Methods in America

F. S. Leete, a prominent official in the forestry service of India, who has been assigned by the Indian government to investigate lumbering methods in America, has arrived in Vancouver and will visit scenes of logging operations in British Columbia, and have been 26 years in the service of the Indian government, and has spent his whole time in the forests of India, and has had a great interest in the preservation of forests, a position similar to that of chief forester in the Canadian forestry service.

Forest areas amounting to approximately 250,000 square miles of timber cover about one-fifth of India, and about one-half the area of the United States, he said. Every type of timber to be found on the American continent is included in Indian forests, and the principal hardwoods in America soft woods predominated largely. India was not trying to develop outside markets, but was highly engaged in lumbering and supplies the needs of her own markets for lumber.

One of the objects of Mr. Leete's visit is to study the methods of lumbering, holding logs, there being a proposal in India to displace elephants and adopt mechanical power.

## The German Way

Ruse of a Burgomaster to Confiscate Finery of German Girls

Promised a dance, all the girls of Hirschhausen were up, bright and early the other Sunday, dressing themselves in their best and prettiest clothes, and in their houses, hidden places fine raiment of all description. The girls, all smiles and daintiness and silk, turned out in the half hour, and for hours they waited, awaiting partners and musicians. At length the burgomaster arrives, and having closed the doors behind him, he takes a sheet of paper and each of whom was ordered to sign her name on a sheet of official paper. The burgomaster than announced that the dance was to take place. Sadly disappointed, the girls departed, and the following day the burgomaster sent a number of policemen on a visit to the houses of the girls, and in their prettiness, the whole of their finery was seized, and confiscated. The invitation to the dance had been merely an official ruse to catch the forbidden garments.

Zeebrugge Harbor Practically Closed

Large Dredger Has Been Identified Inside the Breakwater\*

The plight of the Germans at the Belgian coast, as a consequence of the measures taken by the British navy to blockade the port is even more serious than has been believed heretofore. Photographs taken from aeroplanes show that the entrance of the harbor is rapidly silting up and that, accordingly, the British effort to clear the channel is being reinforced.

The sunken vessel inside the breakwater, which was at first believed to be a large dredge. The loss of this ship evidently has crippled the Germans in their attempts to clear the channel.

Idols as Kindling Wood

One could hardly imagine a more revolutionary proceeding in the life of a Chinese than to burn the household gods and build fires with them. Yet this is what is happening in many places today under the influence of Christian teaching. Some who are uninterested in the matter declared that he was right, they took communion action and transformed the temple into a workshop and the idols into tools.

Even the most ignorant of the

Chinese, who had been taught that

the idols were the gods of their

ancestors, could not understand

why they should be destroyed.

On and after Saturday, June 1st, it becomes illegal for restaurant keepers to remain in business unless they have a license from the Canada food board.

This applies also to food dealers

and to those who sell four meals per day to outsiders, other than the household or members of the family.

## Gathering Up the Scraps of War

Often Enough Work Has to Be Carried on Under a Terrible Bombardment

Upon the terrible fields of war, there is nothing, aside from the waste of human life, that produces a greater waste than that of the occasional person who is allowed to wander over a battlefield just after an attack than the great quantities of metal that is scattered about, with seemingly reckless profusion.

All this material was made

through long hours of sweat and toil to be used in saving the country, and all is lying in great quantities unused about a dead battlefield, having unflinching its purpose and having served no end.

But it is not now lost, as it was up to a few months ago.

Hardly have the troops passed

forward in an attack than a second

and a third and a fourth territorial

unit comes in to the battlefield and begins the cleaning up process.

Sometimes their companions

call them "rag pickers of the army" and sometimes "the scavengers for spoils," but in the present official organization of the armies they rank

as a very important corps.

"For any man who allies himself to succeed, it will be a sorry world to live in," Mr. Lloyd George said.

"It is impossible to exaggerate the importance of the significant issue with which we are confronted today," he declared. "The fate of the world, the destinies of men and of generations would be

fashioned on the failure or triumph

of our cause."

"The Prussians should succeed,

today, they would be back in

the dark dungeons of the past.

We are paying a big price,

a sad price, for victory,

but the sum total of human wrecks

is a small price to pay for the

great good that we have

come again to darken the lives

of millions and desolate millions of homes."

"In the Prussians should succeed,

today, they would be back in

the dark dungeons of the past.

We are paying a big price,

a sad price, for victory,

but the sum total of human wrecks

is a small price to pay for the

great good that we have

come again to darken the lives

of millions and desolate millions of homes."

"In reference to the Americans," the minister said, "I have heard

that they are to be back in

the dark dungeons of the past.

We are paying a big price,

a sad price, for victory,

but the sum total of human wrecks

is a small price to pay for the

great good that we have

come again to darken the lives

of millions and desolate millions of homes."

"In conclusion," Premier Lloyd

George said, "we have had a great crisis.

We have had von Ludendorff's threat

to order for the Panzer Corps.

They carry ninety miles,

are not to be stopped,

and they cannot fire more than 20

25 shells without being repaired.

But you can appreciate the intangible

results which will be obtained by

the nation that first employs such

guns."

Wore on the Road

A priest in a West Tipperary vil-

lage sent a pair of boots to the cob-

bler for repairs, but Bill, who had

been imbibing rather freely, felt no

inclination for work, so the boots

were not repaired.

On the morning his nerves were rather

shaky and he longed for a hair

the dog can't bite. His boots

were still dirty so he

there was no harm in putting on the

priest's, which he accordingly did,

and turned off into the village pub.

"I'm not going to meet the priest," he said.

"I sent my boots for repairs, William;

are you not foolish with them yet?

"Your reverence answered Bill

calmly, "they're not mended yet, but

they're on the road."

## HEAVY SACRIFICES MADE FOR A GREAT PURPOSE AND HIGH IDEAL

HAMMER BLOWS THAT STRENGTHEN GOOD METAL

Premier Lloyd George Points Out That If, For Any Cause, the Allies Fail to Succeed, This Will Be a Sorry World To Live In, Under Domination Of the Hun

Premier David Lloyd George, in replying to the speech of the British allied arms at the dinner of the Printers' Society of London, said that Britshers have made unsurpassed sacrifices for a great purpose, and we are two qualities, need and power. We have political differences. These differences will come again, but for the moment we have one purpose.

One of the most encouraging things, the premier continued, was the "superb valor and the trained skill with which the American troops have fought in the single and defeated the foe. It is a most encouraging thing, because there has been a great flow of these troops and we have been dependent on them."

"For any man who allies himself to succeed, it will be a sorry world to live in," Mr. Lloyd George said.

"It is impossible to exaggerate the importance of the significant issue with which we are confronted today," he declared. "The fate of the world, the destinies of men and of generations would be fashioned on the failure or triumph of our cause."

"The Prussians should succeed, today, they would be back in the dark dungeons of the past," he said. "The Americans have been invented by an American general early in 1914, by Bertha Krupp von Bohm Uebelbach (principal owner of the Krupp Works). The Krupp Works, escorted by a swarm of technical experts and was about to retire when Frau Bertha dismissed all the party, except two confidential members of the firm, and with the latter conducted the general to a secret room.

"Here, the visitors were shown an enormous gun, which the Germans had abandoned when they dashed forward to the assault. Or again they may explode about the first man to touch them, but nevertheless they must be gathered up both for the removal of such a menace and for the trained skill of which the material they contain.

"Then come the hand grenades, which the soldiers have to fall from the head of a soldier in the heat of a charge or may have fallen to the ground as the wearer himself fell.

"That when they appear in the heat of a charge, they are right, a witness to the great traditions of their great country. This is in itself a source of support, sustenance, and encouragement to the men, while the human hearts are watching the conflict going on in France."

In conclusion, Premier Lloyd George said, "we have had a great crisis. We have had von Ludendorff's threat of hammer blows. Hammer blows would bring down metal but the metal and consolidates good metal. There is good metal in British hearts and it has stood the test of centuries. It will stand this, so will that good metal across the channel who are fighting for the honor of their native land."

**Ingram's Velvola Souveraine Face Powder.**

The delicateness of a complexion always for the healthiness and brightness of the skin is a great advantage. Belts of velvety softness and fragrance is Ingram's Velvola Souveraine Face Powder. It keeps the skin smooth and bright, hiding wrinkles and blemishes, the little wrinkles and places most vulnerable with the complexion that it is scarcely visible. It adheres even to the most delicate skin, and it has a refined and gentle fragrance.

(Continued.)

Foster now regretted that he had helped the poachers, although he thought he had made friends with them, but he thought it might be useful. He had met Border Scots in Ontario, and knew something about their character. They were marked by a stern independence and inherited from the moss-trooper ancestors and he thought Pete was a typical specimen of the virile race. The men had him follow the dyke, and leaving the road they turned east up the side of a sparkling burn.

The narrow strip of level ground was wet and covered with moss in which their feet sank, but the hill-side was too steep to walk along it, and a silent, greyish-green grass to the ragged summit where the peat was gashed and torn. Here and there a stunted thorn grew in a hole, and here and there a few desolate, and Foster, glancing at his companion, thought he understood why the men who were living off the land were living prosperously when they came out to the rich wheat soil of Canada. The men of the Forest, who fell at Flodders holding fast to their spears against the onslaught of England's finest cavalry, were bred in these wilds, and had left descendants marked by their doleful shorthorned cattle. Foster was tiring, and great hair on his face was deeply lined, but he crossed the quaking moss with a young lad's stride, and Foster thought the men must set him as granite in spite of his twinkling smile. He was a man who would forget trifles, a favor now, an injury, and Foster was glad to find that he was on his side.

At the head of the glen they climbed a long grassy slope and came to a clearing where the new peat torn into great black rills and piled in hummocks. This was apparently Nature's work, but Foster could not see that the men had not been here, the hills could have worked such havoc. Crossing the rugged waste to a distant cairn, they sat down upon the stones, and Foster lit his pipe from Pete's pouch.

"I'll head east until I find a burn that will lead ye down to the road, then all the cairns the boy's seen a folk will see the reek of Hawick," he said and added after a pause: "Maybe ye'll no' be stopping in the town till the night. After that, I think I'll take the hills again. I'm going south towards Liddesdale, but I expect that's out of your head."

Pete thought: "The last time he

done in my regular line this side o' Hawick. Buegleach looks after his

and paltrig well, and his

marauding, but he's a' the way from Teviot to Liddel. But I have

freinds a' the way to the North

Tyne, and there's no' many sheep

sales I do not attend. If ye're wanting it, I could give ye a few directions that might help ye on the road."

Foster thanked him and listened carefully. It looked as if the poachers, who seemed to work now and then as honest drovers, knew each other well and combined for mutual protection. It might be useful to be made an honorary member of the gang.

"Wech," his companion concluded, "we'll stop at the inns I've told ye o', ye'll find folks who can hand a quiet tongue, and if ye see any reason to do so, you can say ye're a friend o' mine."

Foster rather diffidently offered him some money, but was not surprised when the man refused the gift. Indeed, he felt that it would have repaid him if Pete taken it.

The latter gave him his hand with a smile and turned back to the glen while Foster sat on a log across the stream. He reflected with some amusement that Pete probably thought him a fugitive from the law.

After a time he stopped to look around. His view extended a horizon of two or three miles, for he seemed to be near the centre of the glen. Its surface was broken by the hummocks and the large trees, and tufts of white wild cotton relieved the blackness of the gashes and gullies. ## Rural Problems Discussed

### War Conditions Have the Effect of Stimulating the Industry

Dean Klinck, of the University of British Columbia, recently gave an address before the Victoria and District Teachers Association on "The New Agricultural Situation." In this paper he expressed the opinion that the difficulties which confront farming as a result of war conditions would have the effect of stimulating the industry, and that these after all might be permanently beneficial.

The advantages of machinery over manual labor were referred to in the address. Pointing out that during recent years it had come to be generally recognized that modern industrial methods must be applied to the rural, or "cittyward" movement of the country people to be stemmed. Industrialized agriculture called for better organization in marketing, and the cost of production must be reduced to the minimum through the introduction of machinery.

The theory which advocated innumerable small holders of land was less ideal than a co-operative system. Dean Klinck said that the future of his life as a teacher, and the improvement of country life might seek as its foundation better economic and social conditions.

The men of all sorts who were dissociated not only with their economic returns, but also with their social environment. This was a healthy and legitimate dissatisfaction, which ought to be expressed in the improvement of the conditions. The telephone and the automobile, primarily introduced as business necessities in connection with the farm, were now doubtless serving the social needs of the rural communities in great measure.

"Country people will no longer respond to untrained leaders," declared Dean Klinck. "If the graduate of an agricultural college makes a splash in English, the others will wake up." To the rural minister, the rural teacher, and the agricultural representative who was sent to the rural communities to look for leadership, and it was a cherished hope that the agricultural college of the future would specialize in the field of agriculture, and not only in the field of agriculture, but also in the field of rural teachers. Co-operation was needed among the rural clergy in greater measure than was to be found at Folkestone.

The lecturer had some excellent suggestions as to the improvements which might be made in respect to social and recreational, educational and religious requirements in the rural districts, and the audience was informed as to what was being done in this way. Sports and a sense of time to play and a place to play were not the only things to be remembered in connection with recreation; supervision of play was an equally important thing.

### The Wings of the Aeroplane

#### Opportunity for Farmers to Engage Extensively in the Production of Fibre Flax

War conditions have afforded an excellent opportunity for farmers in certain sections of Canada to engage extensively in the production of fibre flax. They will therefore not only add to their sources of income, but will also be of direct and vital assistance to the efforts of all allies. The mastery of war is a great, perhaps the determining factor, in the struggle now going on. Aeroplane parts being built in vast numbers as rapidly as possible, a covering for the wings of these planes is the only material found satisfactory. Large quantities are also needed for the manufacture of ambulances and truck covers, threads for sewing uniforms, and a number of other uses. Were the supply of fibre flax for these purposes to be short, as is threatened, it would directly and profoundly affect the supply of the allied forces.

Before the war was imported into the United Kingdom mainly from Belgium, France, Germany, the Netherlands and Russia. The main supply is, of course, now cut off, while in 1914 France produced 100,000 tons of fibre flax for export, Belgium a mere fraction of its former supply, and the Netherlands about half in former quantity. Our own contribution, Russia no exports of fibre flax can be depended on this year; Ireland, the great flax-producing country in the United Kingdom, is in a position where the best of seasons and with the largest possible acreage under flax, cannot meet the demand for fibre flax.

The foregoing information is contained in a circular on flax growing issued by the federal department of agriculture, and can be had free by addressing the Publications Branch of that Department, Ottawa.

#### Interested

Mistress (to cook)—I have some friends coming to dinner today. May we, with you, do you very best? I'd like something especially nice if you can manage it.

Cook—You can depend upon me.

We've got some friends of me

### Kipling On the Huns

#### They Believe That Evil Pays, and They Must Be Disabused of This Idea

People who have been brought up in mass organizations even in every camp that supports us believe they believe that evil will pay them are not going to change their belief till it is proved to them that evil does not pay. So the Hun believes that he will be paid him in the past and will pay him better in the future. He has had his start. Like the "Thief" he has known success and he means to do before he opened his campaign against mankind. As we have proof of his poison, we are weak and knotted up, we are prepared to be beforehand, and his spies had given him the fullest information about all the people he intended to attack. So it is done what he thought it would be. He thought out the hell he wished to create; he built it up seriously and scientifically with his own spirit, that it might grow with his needs; and at the hour that he judged best he let it loose on a world that had been believed there were limits beyond which men dared not sin.

Nine-tenths of the atrocities Germany has committed have not been published. I think him a mistake. But one gets hint of them here and there—Folkestone has had more than him. For instance, we were told the other day that more than 1,000 English non-combatants, men, women and children, had been drowned, burned, or blown to pieces in Germany. The German has no conception that the veil is lifted after the war we shall have no conception of the range, and system of these atrocities. Let me tell you what we realize as these results in Belgium and occupied France just across the water, the cold organized misery with which Germany has treated the populations who have fallen into her hands, that she might break their bodies and defile their souls. That is part of the German creed. What is understandable, a people who have had a breed that have worked for and brought about these things? And long as the Germans are left with any excuse for thinking that these things can in any case peace be made with them in which men can trust? None. For it is the peculiar essence of Germanism to believe in the German power that it is Germany's moral duty to break every tie, every restriction, that binds man to fellow-man. She will not be satisfied until she has broken mankind to be against her. That is the lesson that no race can break its way outside the borders of humanity.

From an Address by Rudyard Kipling at Folkestone.

### Eat Less Bread

#### Must Reduce Consumption in Order to Supply Soldiers With Food

The allies' wheat supply is perilously close to the point of exhaustion. Their wheat stocks are not large but these countries are both practically inaccessible by reason of the shipping shortage. There are no vessels to bring Australian wheat to America, but the project is problematical, as it can be carried out only next year or four months is necessarily limited. Part of the Argentine crop has still to be moved but with increasing demand upon cereals to supply the war soldiers' consumption to support the allies in their present crisis the ships can be spared. One boat on the North American route, and after fourteen years of a more or less peaceful existence in America will bring the sovereign's uniform on his back again.

Hancox is jubilant. His personal belief is that he has large measures to fight his battle with the Germans to the advantage of his country and to his own satisfaction in eliminating several Boches, and he has signed up with the Canadas.

Hancox is used to the smell of gunpowder; a round silver medal, about the size of half a dollar, and forty-eight years of age, is "going over" in his pocket.

He has taken to using Japanese vessels to bring Australian wheat to America, but the project is problematical, as it can be carried out only next year or four months is necessarily limited.

Part of the Argentine crop has still to be moved but with increasing demand upon cereals to supply the war soldiers' consumption to support the allies in their present crisis the ships can be spared. One boat on the North American route, and after fourteen years of a more or less peaceful existence in America will bring the sovereign's uniform on his back again.

He is a small man, with a drooping, sandy moustache and snapping blue eyes. He was born in 1871 when his father, a soldier, too, was serving in the army. Hancox was twenty-eight years old when he was fighting on the peaks of the Himalayas. His report was sent to follow up one that had been hacked to pieces by the Afghans.

He is the only man in the world

like him who wants to go back, and I know

I ought to go back and all that, I'd

think there's a lot of the Englishmen

here now—good, young, sound

ones—but I can't go, too, I think

I don't understand 'em—I think

they're rotters, I do."

### Prussian Education

#### Germans are the Most Docile People in the World

The Germans, says a competent English observer of Hun character, are the most docile people on earth. They think what they are taught is taught to them, whether they are taught to believe, or whether they are told what they are told to do; they leave undone what they are told not to do.

In this way the world has seen

the reign of despotism.

But the quality permeates not only the military organization of the nation,

it permeates also the educational.

Prussian education is organized

in a state of autocratic control.

A few men at the head of it head it as

they will for their own purposes.

These men accustomed to their

authority unquestioned, develop into

tyrants; these sense of proportion be-

comes lost, the standard of value becomes blurred.

They cannot laugh at themselves;

and men who cannot laugh at them-

selves will be weak in all they

try of whatever portion of its activi-

ties they dominate, down its ruin

about their ears.

The German people have no educa-

tion. They have great learning but

no knowledge. They are a double

army burdened with such egos

that they work with their

and still think they are doing right.

They have no honor, so they create

their own.

In education, if there is no critical

education, there is. There is a

lesson here for us in our

educational reforms—from the Van-

couver World.

In Prussian system of education kills individuality. It refuses to accept changes. Its dictum is: What is, is perfect. It is not permitted to question this. And so it is never questioned. There is no critical spirit.

In education, if there is no critical

education, there is. There is a

lesson here for us in our

educational reforms—from the Van-

couver World.

In planning the 1918 garden the first thing to take into consideration is the soil. If it is wet, it is good for the gardener is fertilizer. The coming of the war has not interfered with the placing of seed in the common commodity. It is to be hoped that the gardener should be able to procure farmyard manure. This is used at the Experimental Farm, Ottawa, with the best results.

In planning the 1918 garden the

first thing to take into considera-

tion is the soil. If it is wet, it is good

for the gardener is fertilizer. It is

to be hoped that the gardener should be able to procure farmyard

manure. This is used at the best

results.

Every seed should be made to

count this year, because seed is

scarce. Every plant in place is a

success. The amateur gardener has a

weakness for using more seed than is

absolutely necessary.

Why We Must Cook Meat

Raw Meat May Infect Consumer

With Tuberculosis and Other Diseases

No meat should be consumed raw for the reason that it may not only infect its consumer with tuberculosis but also with trichinosis and other

The heat ordinarily applied to a heavy roast does not sterilize the lymphatic vessels, the connective tissue, the flesh. If the animal is tuberculous the glands are always affected even though no evidence of the disease is to be found in the tissues.

The heat is killed when heated to 145 degrees Fahrenheit for thirty minutes. This is called pasteurization.

Meat, however, is poor conductor of heat, and heat penetrates to the centre of large pieces of meat very slowly.

The exterior of a roast of beef

reaches a temperature of 145 degrees

Fahrenheit when heated to 145 degrees

Fahrenheit for thirty minutes. This is called pasteurization.

Meat, however, is poor conductor

of heat, and heat penetrates to the

The exterior of a roast of beef

reaches a temperature of 145 degrees

Fahrenheit when heated to 145 degrees

Fahrenheit for thirty minutes.

After cooking he uses the central

portions for feeding and inoculating

animals. The results were startling.

He found the central portion joined

worms six pounds never attained a

higher temperature than 44 degrees

Fahrenheit during ordinary cooking.

The general on the outside was

dead but those on the inside re-

mained alive.

The results of his experiment

prove that the most

common method of cooking

meat is to boil it.

Boiling—From "Do We Need Meat?" by Alfred W. McCann in May Physical Culture.

The Nakedness of the Issue

The war situation is plain enough,

Germany says she means—as she

has meant for a quarter of a century or

more—to capture the channel ports,

control the rivers, and to render the Straits of Dover impassable, and to levy upon us a huge indemnity in war materials and

more. The man who is

not a fool can see that

the war is a war of

aggression.

Practising a system of permanent

soil exhaustion is not the best way

for agriculture.

It is the only method fair to future

generations.—Farmers' Review.

### ANNOUNCING A NEW

## CHEVROLET

### "Baby Grand" Touring Car

THE demand for Chevrolet performance in a larger and more powerful car is met by the Baby Grand Touring Car. Chevrolet engineers have, in this car, perfected many new features which give it a quick get-away, surplus power on hills, and reliability under all road conditions.

On account of its power, flexibility, comfort and easy clutch, this model appeals to lady drivers. The car is extremely well finished, nicely appointed and fully equipped.

### EXCLUSIVE FEATURES

37 H.P. 4 cylinder valve-in-head motor, extremely powerful, smooth, flexible and efficient.

Cooling—With circulated by centrifugal pump, using large honeycomb radiator.

Clutch—Cone type, extremely easy to operate.

Brakes—Positive in action and easily operated.

Ignition—Remy.
